LabBook

Digitalising chemical analysis

We recognise that surface treatment companies are under pressure to continually reduce costs, provide responsive service levels and achieve highest levels of quality compliance for multiple specifications. Customers provide limited order book visibility, yet expect delivery within days or even hours. With all of these operational, technical and commercial challenges, it is difficult to continually improve productivity and grow your business.

However, we recognise your challenges and have developed **LabBook** specifically for surface treatment companies. LabBook maintains digital records and manages specification compliance by exception; to streamline chemical analysis.

- Chemical analysis & test results
- Mobile & offline record capture
- Specification compliance & management
- Full audit trail of chemical additions
- Integrated periodic testing

Who are Valuechain?

Valuechain provide smart manufacturing software to build world-class supply chains. Our productivity, collaboration, and intelligence solutions enable organisations to digitalise their businesses and improve competitiveness.

Our team have decades of experience of running surface treatment companies and our solutions are designed around real industry needs to overcome technical, operational and commercial challenges.

Your chemical testing assistant

One consolidated platform

Whether you are a galvaniser, anodiser, chrome plater or aerospace special process house; LabBook manages analysis and compliance of all your finishing solutions, from one intuitive platform.
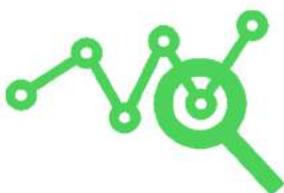

Simplified compliance

Maintaining accreditations such as Nadcap, ISO 14001 or AS9100 and complying with multiple customer specifications, can make the difference when acquiring new clients, and retain existing ones. LabBook establishes periodic scheduling for tests, and intuitively provides a complete audit trail of chemical test results to streamline multiple specification compliance.

Proactive Risk Management

LabBook provides automated alerts through an integrated task console if solutions are approaching a threshold level, or failing a specific test; ensuring you proactively resolve any non-compliance immediately.

Visual quality assurance

When test results are entered into LabBook via tablet or PC, they are cross referenced against predefined parameters and visualised in LabBook's smart dashboard to analyse trends and identify exceptions.

Share intelligence throughout your company

Assign actions to team members and provide a full audit trail of every solution addition. Share analysis reports with key stakeholders to provide process compliance transparency to drive continuous improvements and secure new customer approvals.
